Justin Tagalogon-Nguyen

Software engineer with nearly 5 years at The Walt Disney Company who automates manual processes and builds custom technical solutions for problems old and new. Replaced a manual quarterly conversion process and a password-protected Excel workbook with web applications, led a Windows Server 2012 to 2022 migration, and presented CommUNITY Messenger, a self-built mass communication tool, in the Innovation Showcase at the Disney Data & Analytics Conference. Works across Python/Flask, SQL Server, Power Platform, Windows Server and IIS.

WORK EXPERIENCE

HRIS Developer
The Walt Disney Company
10/2023 - Present — *Anaheim, CA*
Global HR Operations - HRIS Infrastructure
Achievements/Tasks

- Led the migration of HR systems infrastructure from Windows Server 2012 to 2022, moving 42+ scheduled data-processing jobs, 3 web applications, the service account and encryption key ring with no business-impacting downtime.
- Migrated secure file transfer from Bitvise SSH Server to GlobalScape EFT: mapped 4 undocumented stakeholder groups and their data flows, built the event rules, and flagged 2 security issues for remediation before cutover.
- Built and hosted Flask web applications on IIS with Okta-based single sign-on and role-based access (see Technical Projects).
- Restored a vendor-blocking production file transfer by tracing the failure to a single expired PGP key through event-rule failure reports.
- Reverse-engineered an undocumented 4-package SSIS integration by parsing its package XML with Python, then documented the file-triggered orchestration for future maintainers.
- Resolved 160 Jira work items across 12 epics from January to September 2026, alongside on-call rotations.
- Ran Claude training sessions for colleagues moving from Microsoft Copilot and wrote handoff documentation for each application owned.

Workforce Data Solutions Analyst
The Walt Disney Company
12/2021 - 10/2023 — *Anaheim, CA*
Disneyland Resort Workforce Management - started as Data Integration Associate
Achievements/Tasks

- Managed and built optimization tools and applications for Workforce Management, including TimeCheck and CastConvert.
- Served as liaison to resort leaders, translating business needs into technical solutions.

Software Support Engineer
VF Engineering
12/2020 - 12/2021 — *Anaheim, CA*
Achievements/Tasks

- Tested and validated engine control unit software, maintained protocols and documentation, and supported customers.

Research Associate
California State Polytechnic University, Pomona
09/2019 - 07/2020
Achievements/Tasks

- Analyzed gender bias in text using sentence embeddings, sentiment analysis and named entity recognition.

EDUCATION

Bachelor's in Computer Science
California State Polytechnic University, Pomona
08/2017 - 06/2020 — *Pomona, CA*

SKILLS

Python | Flask | SQL Server | T-SQL | SSIS | Snowflake | Tableau | PowerShell | JavaScript | C# | ASP.NET | IIS Management | Windows Server | GlobalScape EFT | SFTP / PGP | Okta SSO | Workday | SAP | Power Apps | Power Automate | SharePoint | Git | Jira | Agile Development | UI/UX | AI-Assisted Development | Technical Documentation

ACHIEVEMENTS

Disney Data & Analytics Conference Presenter
Presented CommUNITY Messenger, a tool I built, at the Innovation Showcase.

National Science Foundation Scholar
Scholarship awarded to low-income, academically accomplished STEM students.

TECHNICAL PROJECTS

IDentify - HRIS Test Data Generator (2026 - Present)

- Flask web application that generates and validates synthetic national IDs for Workday and SAP testing, covering 117 ID types across 63 countries.
- Replaced a password-protected Excel workbook; serves 10+ users on HR testing teams.
- Wrote the specification, rules registry and audit process that kept AI-assisted development accurate.

Time & Pay Policy Portal (2025 - Present)

- Web application intended for enterprise-wide use by leaders, mapping worker groups to eligibility across 10 time and pay policy categories.
- Built policy add, edit and assign functions, transaction history, saved views, Excel export and admin-only maintenance.

CommUNITY Messenger (2024 - Present)

- Power Apps tool backed by 17 Power Automate flows that sends templated announcements to Teams and Outlook with automatic time zone conversion.
- About 40 senders across 4 teams use it to reach department-wide audiences.

Security Governance Database (2023 - Present)

- Sole developer of the application the HRIS Security team (about 10 users) relies on to govern security roles, data levels and access exceptions.
- Built the Exceptions Management module to track expiring and expired access exceptions, with status and assignment workflow, activity log and HR override email generation.
- Migrated sign-on to Okta-based SSO, moved the application to Windows Server 2022, and added access role types, role and data level commenting, profile-by-role search and downloadable reports.

Disneyland Resort - CastConvert (2023)

- Built the middle tier and front end of a Flask and Bootstrap web application that replaced the Disneyland Resort scheduling team's manual quarterly full-time conversion process.

Disneyland Resort - TimeCheck (2022 - 2023)

- Mobile-friendly ASP.NET 6 and SQL Server application supporting all Disneyland Resort leaders who oversee meal breaks, with a real-time shift view so hourly Cast Members take breaks on time.
- Owned database development, UI/UX design, requirements documentation and Jira project management.
